

Use Case Story:

User wants to discover fortune

Assumption:

User has gotten to the website

Steps:

1. User loads front page
2. User chooses button from first question
3. User chooses button from second question
4. User chooses button from third question
5. User hits submit
6. User is redirected to fortune telling page

Variable Interactions:

- User chooses more than one box > doesn't allow second (or more) choices
- User doesn't choose from each of the options > will continue to get a fortune
- User wants to change an answer > Must reload the page and start over.
